## FEATURES

- Bottom-weighted for long-distance casting. The wider profile causes the jig to flutter on the drop. When it's retrieved quickly, it skips on the water like disoriented baitfish

# MJIG02 DAGGERMAN JIG

Needle | 2X Long | Forged | Ringed | Duratin

## FEATURES

- The Daggerman Jig is a front-weighted vertical jig best presented in short, rapid pumps with short pauses in between. Its aerodynamic shape helps the Daggerman rip through the water column, resembling the natural movement of a struggling baitfish

# MJIG04 RIP ROLLER JIG

Needle | 2X Long | Forged | Ringed | Duratin

## FEATURES

- The Rip Roller Slow Fall Jig is built with a slim profile for quick descent on a tight line and its centered weight gives it a stable, but rapid rolling action on a slack line. Two contrasting colors on each side create a blinking flash that triggers strikes

# HOOKS

# HOOK WIRE TECHNOLOGY

## HOOK FORGING
## EXTREME STRENGTH

At Mustad, we pride ourselves in a history of innovation that puts emphasis on the strength and durability of fishing gear, which anglers demand with the fight is on. Throughout the years, fishermen and women have depended on Mustad hooks and tackle to hold strong through propriety durable hook points to Nor-Tempered wire. Forging has been a strengthening technique for a long time, yet Mustad has engineered processes that proves once again the brand's dominance in fish hook manufacturing.

NEW

## ULTRA-NOR FORGE

Our heritage in innovation has led to yet another industry-first in cutting-edge machinery designed to maximize wire strength and minimize fish loss. Mustad's patented Ultra-Nor forging technology presses a channel into the wire, strengthening the wire by increasing the diameter where it matters most. Applied to legendary Mustad hook styles, **Ultra-Nor improves pull strength up to 20%.**

## STANDARD FORGE

In order to increase pull strength, Mustad has utilized an effective standard forging process for a select range of hooks for many years. Without adding more material or increasing the overall diameter, forging the wire adds strength along a single plane, making this especially popular among heavy saltwater anglers. Combined with Nor-Tempering, Mustad hooks are built to be trusted.

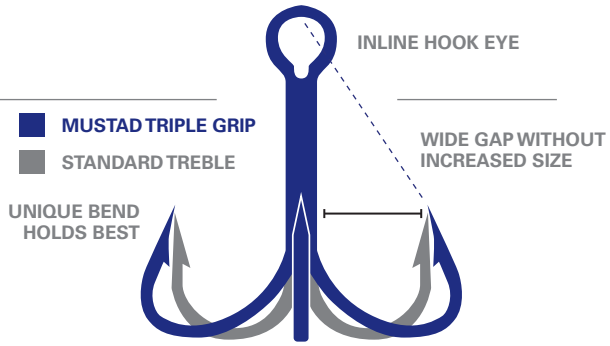

# **NOR-**TEMPERING

In traditional Mustad fashion, our tempering process is a careful, slow and steady process for a stronger wire. A core aspect of all Mustad hooks, the Nor-Tempering is 30% stronger than competitor wire without being brittle. Patience leads to perfection.

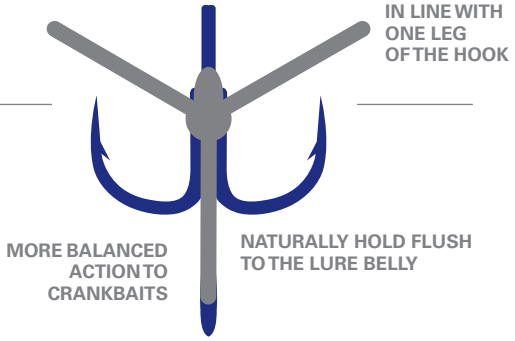

# **TRIPLE** GRIP®

Mustad Triple Grip® hooks combine exceptional hooking and holding capability with outstanding strength. They feature a precise shape that almost "locks" a fish into the elbow of the bend, making it virtually impossible for the fish to throw the hook.

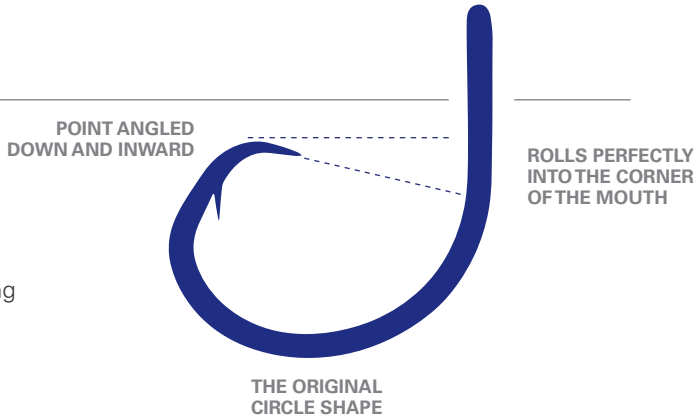

# **INLINE** TREBLE

Made with the Mustad's proprietary automatic brazing technology, the eye is positioned inline with one leg of the hook, allowing the hook to naturally hold straight to the belly of a lure, giving a more realistic and stable suspension display. The first and only, Mustad has designed a brazing process that is done consistently by hook-producing machinery to create the best inline hook.

# **DEMON** CIRCLE

When Mustad introduced the original circle hook, catch and release fishing changed forever. Endlessly imitated, but never matched, Mustad Demon Circle hooks have the optimal 3-degree downward point that masterfully grabs onto the fish's mouth as the hook rolls to the corner, leading in the best hook-up ratios on the market.

# **HOOK POINT** TECHNOLOGY

## **CLASSIC** POINT

Our legendary classic point, also known as a cut point, masters the art of durability and simplicity for anglers worldwide. The process for classic point hooks takes coiled wire into the machine, delivering a hook on the other side, just as we did back in 1877. The point is made with a cutting action twice to create the knife-like edge that penetrates over and over.

## **NEEDLE** POINT

For anglers requiring hooks that maximize penetration ability, needle points are the only choice. Mustad's multi-stage sharpening process meticulously grinds the point to perfection to maintain as much of the wire as possible while reaching a single, ultra-sharp point tip. After the point is made, the hook-shaping machining process begins.

# PREMIUM NEEDLEPOINT

## OPTI-ANGLE™ TECHNOLOGY

Passion for hooks runs through our veins and our thirst for excellence drives our innovation. The next evolution of our industry-leading durable premium needlepoint technology comes AlphaPoint® 4.8. Our state-of-the-art, three-stage Opti-Angle™ sharpening technology, used to sharpen both AlphaPoint® and UltraPoint®, removes less metal from the point than traditional methods – without compromising sharpness. As the sister point to UltraPoint®, AlphaPoint® joins the hook point family as an alternate premium needlepoint, another solution to the never-satisfied task of landing huge fish. Each with their own benefits and applications, the Opti-Angle™ family will always beat the competition in durability whether fishing in the deep or amongst cover.

# MUSTAD JIGGING ASSIST RIGS

Mustad offers a comprehensive range of options for vertical jigging tactics, featuring four rig styles in a combination of sizes to match a variety of techniques, including light, slow pitch, vertical, and heavy jigging. Along with high quality UltraPoint® hooks, we only use the best PE and Kevlar materials to produce these rigs. All rigs come dressed with either tinsel, reflective paper, or glow beads for added flash.

# FLY HOOKS

## INTRODUCING BIO-BASED FLY HOOK PACKAGING

To reduce Mustad's impact on the waters, our latest fly hook range has launched in bio-based plastic packaging.

Rather than plastic bags, we've chosen a durable, reusable box made of Polylatic acid (PLA) plastics, which is 100% biodegradable and compostable under certain conditions. PLA is extracted from natural, renewable resources like corn, potatoes, and beets. Not only is it made from sustainable materials, but also uses significantly less energy to produce while generating much fewer greenhouse gases.

Fly tiers will welcome the reusability of our new, robust fly hook boxes. Heritage Fly Hooks are packed for easy access and stack well on fly tying workbenches. Sort packs by type with the improved color-coding and specification visible where it's needed most.

## TFCL THOR FLUOROCARBON LEADER

- High abrasion-resistance
- For targeting in heavy cover or dragging baits along rough, rocky bottoms.
- Low stretch and slack means solid hooksets
- Sinks along with your bait to the target depth

DEMON PERFECT

SPB SMOOTHLY THE STRONGEST

## What is SPB Technology?

***Stretched – Pressed – Bonded***

- Increases smoothness
- Maximizes abrasion resistance
- Retains powerful colors as new

## ML99 DEMON PERFECT BRAID

This 8-carrier braid is pre-stretched to organize and align the molecular structure of every single PE filament and additionally receives a bonding and coating process to improve compactness of the line body and link the single filaments into a 3D matrix for best possible strength/diameter ratio, reduced friction and wear resistance.

### FEATURES

- SPB construction
- Ultra smooth – 8 carrier construction
- Incredible diameter / breaking strength ratio
- Longer casting
- Less friction in the water.
- Near zero stretch
- The ultimate PE braided super-line

## ML96 QLINK BRAIDED LINES

This braid uses the same technology as Demon Perfect Braid (SPB) but it is based on a different braid construction of 4, 6 or 8 carriers. The different body construction optimizes power and price at the expense of smoothness - incredibly strong, reliable and hardwearing in every fishing condition.
